

Innovative materials research

- from basic research to application -

is distinguished by a dense interdisciplinary network under one roof and with an excellent environment.

Mission and Vision

Innovation determines our work: We have ideas, realize concepts and create materials and technologies that are trendsetting.

We think the unthinkable and make the impossible possible!

We link all scientific disciplines, design and model future-oriented solutions. It is our declared goal for the FMF to expand its international leadership position in materials science.
